

Hail Reference

Our Sprung Structure has survived not one but two significant hail storms in the Airdrie area in the past 3 weeks. During the second storm, several vehicles that were parked near your structure recorded serious damage, including dents, broken windows and mirrors. In addition, our satellite dish, mounted on the roof of our main building was knocked out of position and roof fascia/moulding was dented in several locations. This building is about 30 meters from the Sprung structure. Your structure remains unscathed.

Damage from that storm is now pegged at roughly \$25 million, but it could be four times that. "We're in a big of a hail alley here — just slightly sort of north of Red Deer, all the way down to High River, and a little bit across Highway 2," said Godfrey.
